

Whole Milk Powder 800g

Full-cream milk powder 800 g is an alternative that Central Lechera Asturiana offers to conventional milk to meet consumers' needs. To make it, the fresh milk undergoes a dehydration process that eliminates the water and results in a powder that can obtain 6.25 litres of liquid milk from just 800 g of full-cream milk powder. It is made with only 100% natural ingredients: full cream cow's milk and nothing else, with no preservatives, artificial additives or E-s. It also preserves the properties and nutrients of conventional milk, providing milk protein and fat, which is important in our diet.

You can find 800 g full-cream milk powder in your usual supermarket, in a convenient box format that is easy to store and doesn't require refrigeration. You can distinguish full-cream milk powder from semi-skimmed milk powder by the red colour of the package.

Ingredients: Full-cream milk.
